# **1. Warm Tips**

- 1. Please Make Sure Apple device has Sufficient Power before using this Photo Stick for Backup or other operation.**
- 2. Please Do Not Remove the Photo Stick from Apple device when it's working.**
- 3. Transfer file needs a lot of power from Apple device. Hot shutdown may cause transfer failed or damaged.**

## **2. Foreword**

Thanks for choosing JD Drive. Please carefully read this User Manual, which will help you to use the flash drive easier.

If any questions, please contact our customer support via Email:

**[doralin147@gmail.com](mailto:doralin147@gmail.com)**

# 3 APP Installation & Main Interface

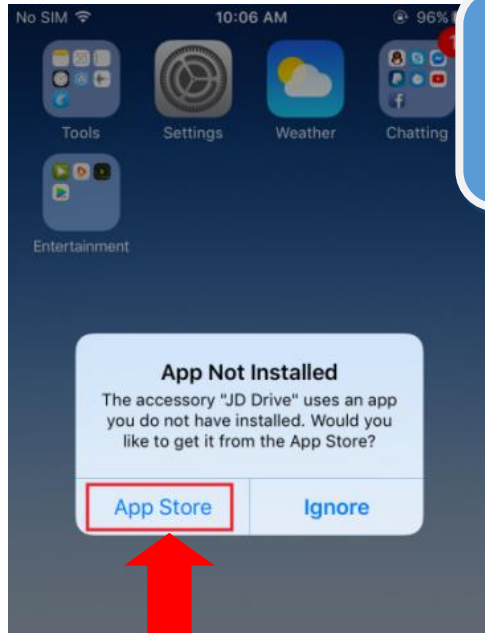

## 3.1 APP Installation

When Plugging the JD Flash Drive into your Apple device for the first time, there will be installation message pop-up.

Please click "App Store" to download and install. You also can download the app from the App Store directly. Search for "JD Drive". **(Please Note: search from**

# APP Store, not Apple Store)

1. Search for "JD Drive"
2. Click to download

Click "App Store"

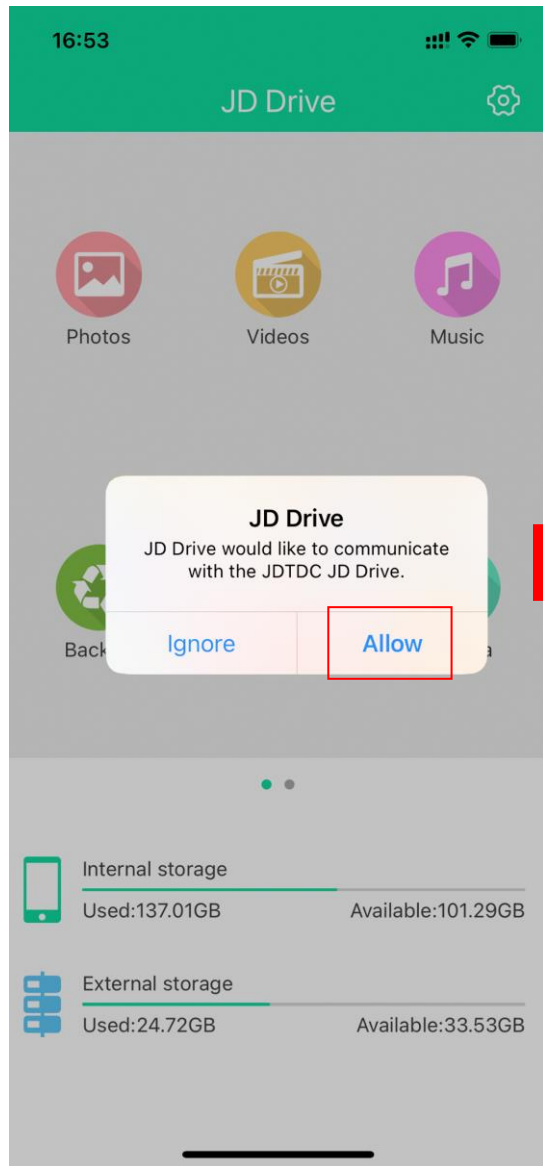

Click "App Store"

## **NOTES:**

It is normal to receive the following message when the JD Drive connected to your iPhone or iPad. JD Drive is an Apple MFi certified product and this message is required for any external device to iPhone or iPad according to Apple's Rules. Please click Allow to go ahead.

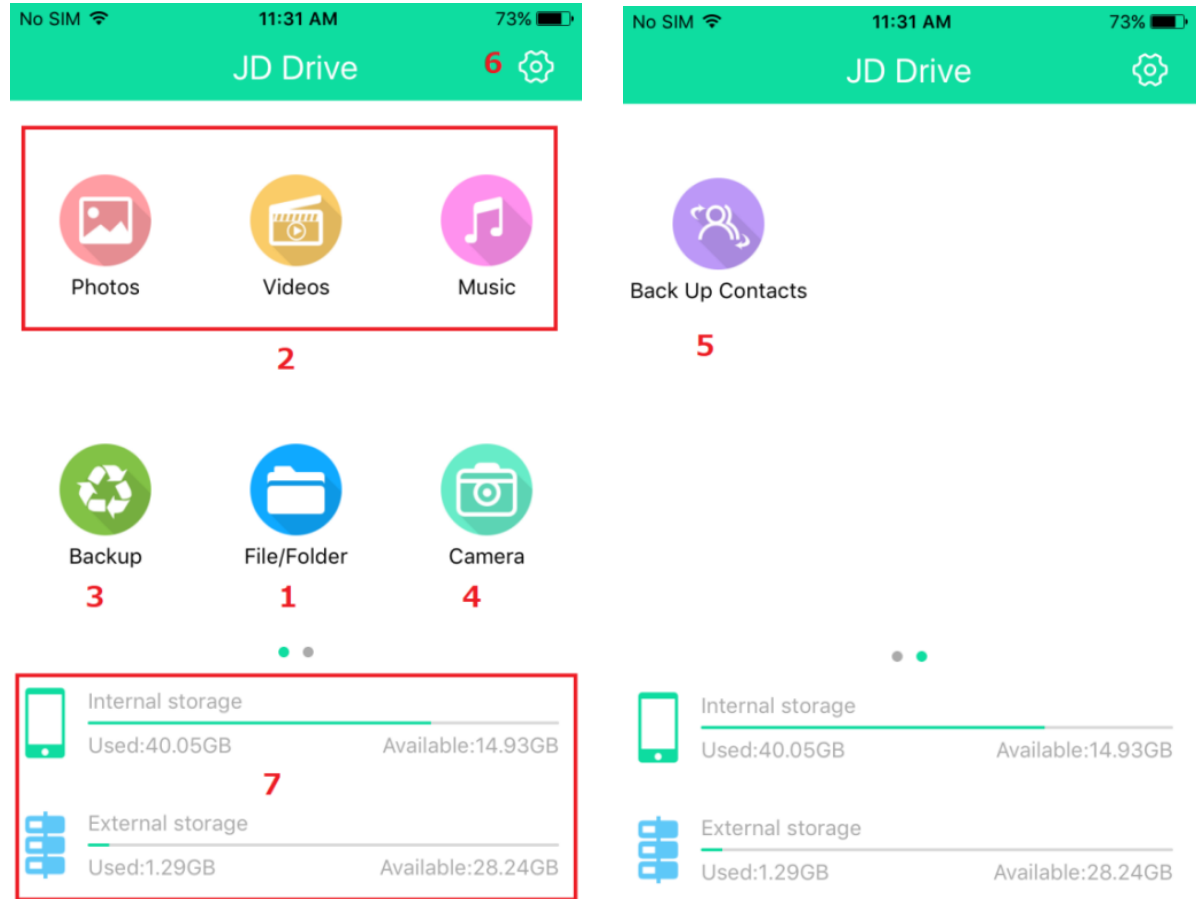

The content of the pop-up window:

JD Drive would like to communicate with the JDTDC JD Drive.

Click "Allow"

# 3.2 Main Interface

## ① **File/Folder**

Create new folder, Sort browsing, open, copy to, delete, share, rename

## ② **Classification Management**

JD Drive iPhone

## **8.3.3 View the Encrypted File**

8.3.3.1 From iPhone or iPad: Enter into File/Folder, you can see the file with a Lock means it was encrypted. When you open the file, need to input the password, then the Lock is Open. (Once you enter into the Encrypted file, no need the password unless you remove the USB Flash Drive from your iPhone/iPad, and

plug in again)

1. Enter the password  
2. Click "OK"

8.3.3.2 From Computer: Please note that, due to safety consideration, the encrypted file is invisible on computer, you cannot find it, if you want to view the file from computer, need to decrypt from JD Drive App from iPhone or iPad first.(please see the following point about how to Decrypt the Encrypted File)

## **8.3.4 Decrypt the Encrypted File**

### **8.3.4.1 If the Lock is Locked: File/Folder**

---> Long press the Encrypted file --->

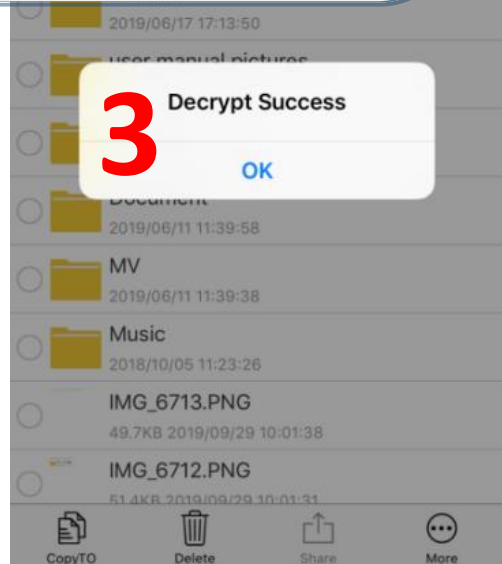

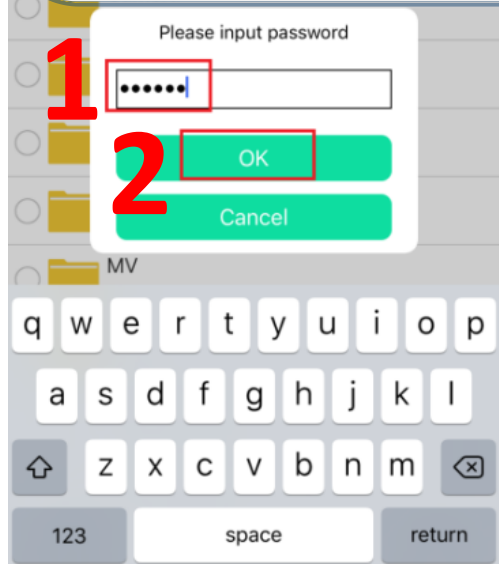

More ---> Decrypt ---> input password

--->OK ---> there will be message pop-up

to show Decrypt Success ---> OK

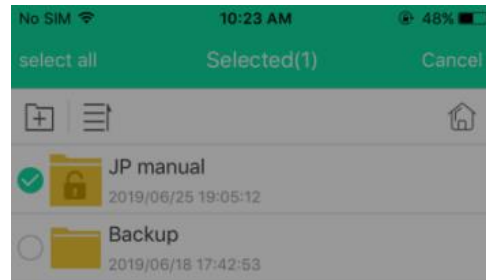

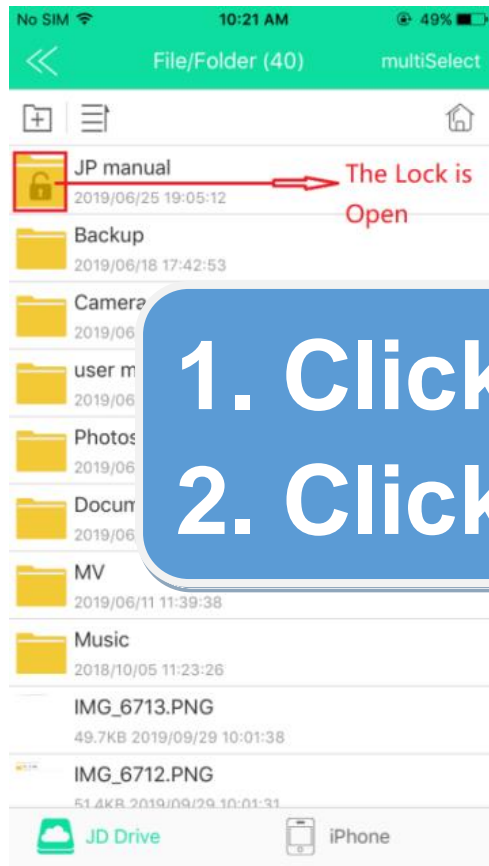

1. input password
2. Click "OK"
3. Decrypt Success

8.3.4.2 If the Lock is Open: File/Folder  
---> Long press the Encrypted file --->  
More ---> Decrypt --->No need to input  
the password again.

1. Click "More"  
2. Click "Decrypt"

## **8.3.5 Close the Encryption Function**

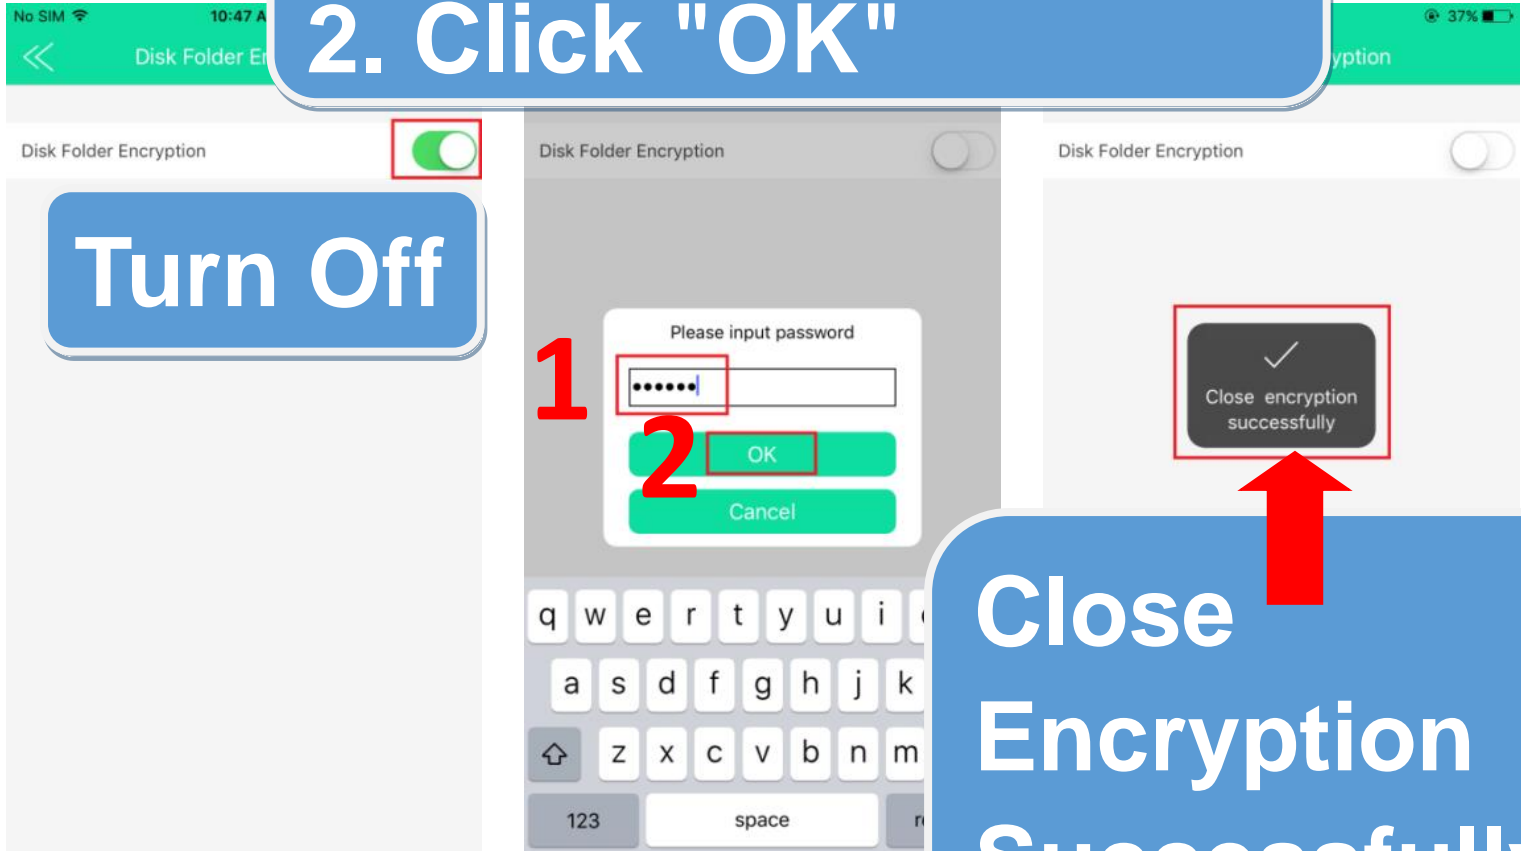

Settings ---> Disk Folder Encryption --->

Turn Off the Disk Folder Encryption --->

Input the Password ---> Close Encryption

Successfully

- 1. Input the Password
- 2. Click "OK"

Turn Off

1

2

Close Encryption Successfully

**Note:** The Password used in this JD Drive is Unified and Only, so please remember this Password, there is no way to reset the Encrypted File if you forgot the password due to safety consideration.

## 8.4 Third-party open setting (Video Player)

**Third-party  
open setting**

## 8.5 Format USB flash drive

You can format the external storage device if necessary.

**NOTE:** Formatting in the App by iPhone/iPad only supports 128GB USB Flash drive. For the 256GB and 512GB Flash drive, please format them at the computer.

**Format**

**Do not disconnect  
the device from  
the device during  
formatting!**

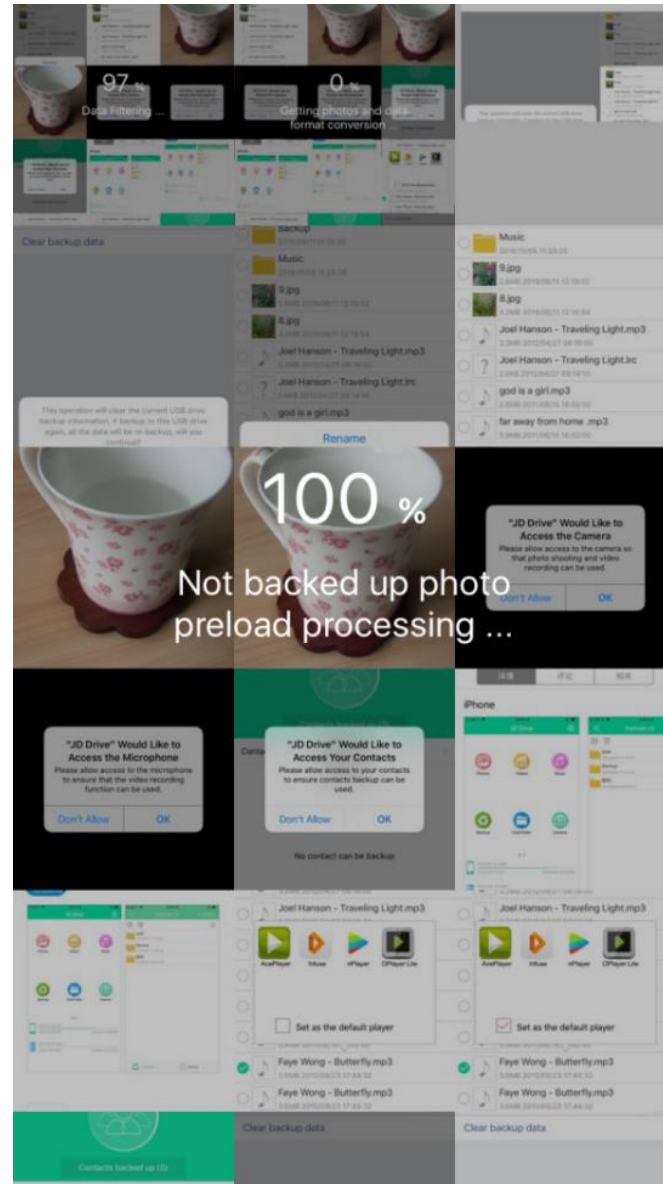

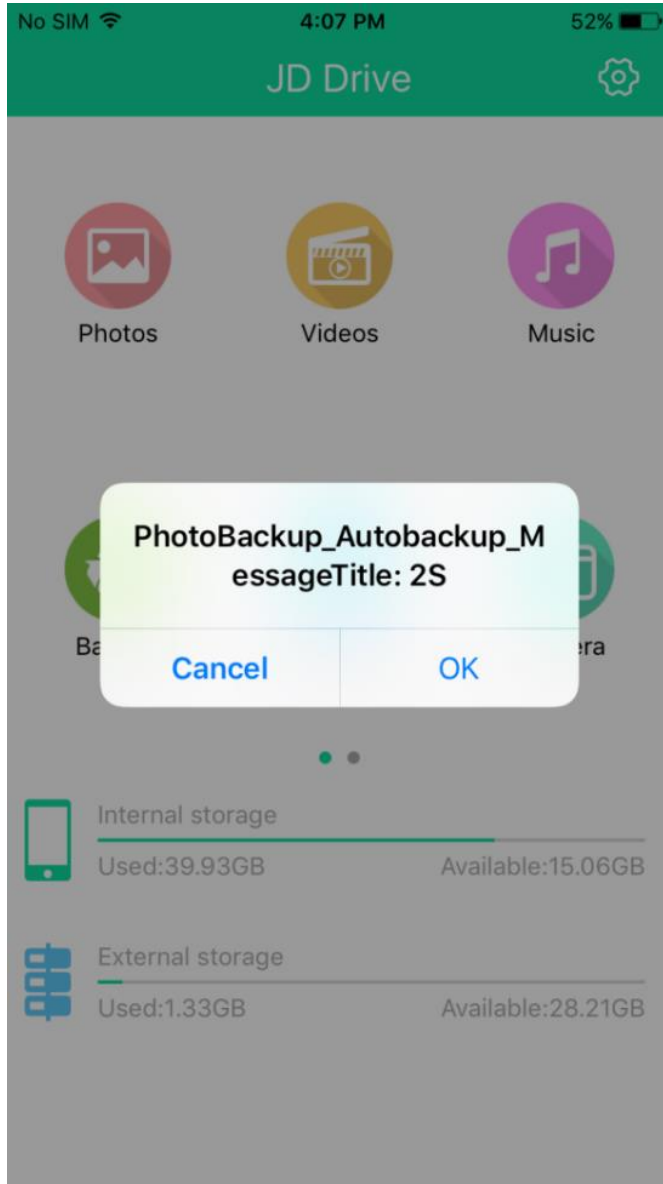

## 8.6 Backup

**Turn on the  
Auto backup**

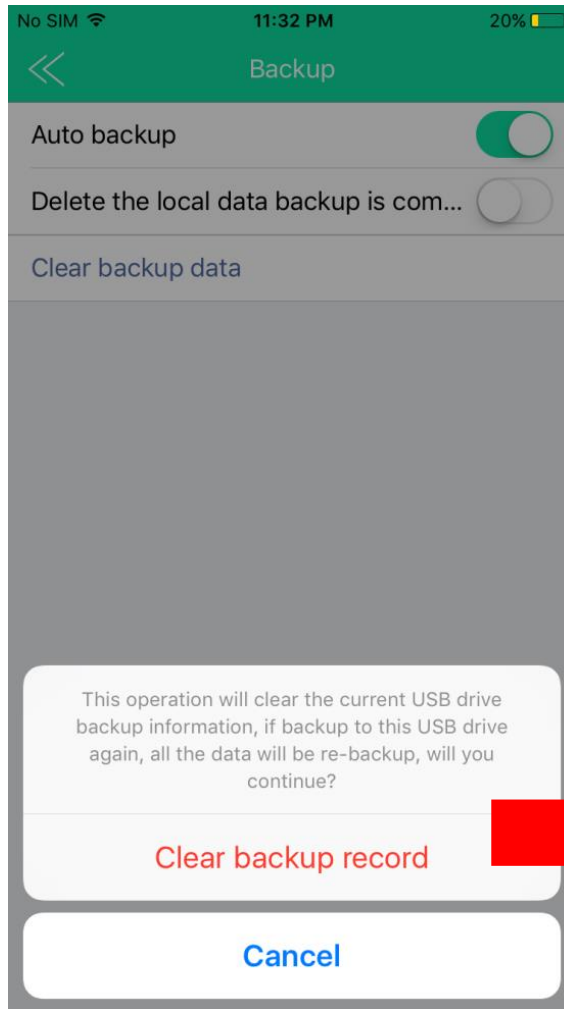

8.6.2 Exit the App, pop-up Auto backup prompt when enter into the app again, click OK to start auto backup, click Cancel to close.

8.6.3 Delete the local data when backup is completed. **(NOTE: For Double Insurance, Please Backup to computer before deleting the local data)**

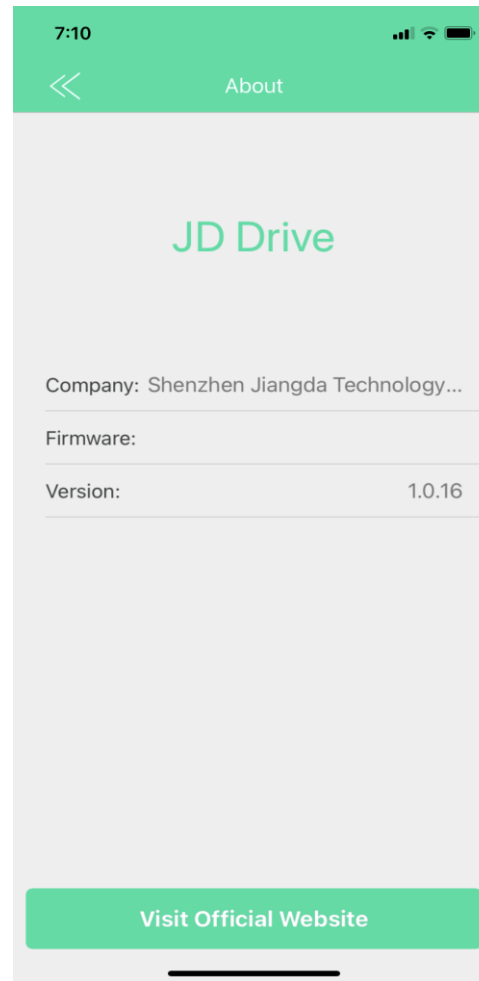

## 8.6.4 Clear backup data

**Clear backup  
record**

# 8.7 About (the APP version keeps updating)

# 9 FAQ & Notes

## 9.1 FAQ

**Q1. Do I need to take the protective case off when using it?**

A: Normally, no need, the lightning connector of this unit has extended 2mm from the body. So it will be compatible with most of iOS device with case. Sometimes, it's better to take the thick phone case off if necessary, such as Otter box case.

**Q2: Does it have transfer limitation every time?**

A: No, there is no transfer amounts limitation generally. It depends on the capacity of your flash drive and the rest available space of apple device. We have tested transfer 10000+ picture and video files from iPhone to flash drive one time. It works well without any issue.

**Q3: Why can't my device read the USB drive when it's plugged in?**

A: 1) If you are using it on iPhone/iPad, you need to install the "JD Drive" app on your device before using the USB drive.

2) If you are using it on computer (Windows /Mac), it does not need App installed. This iPhone USB flash drive works as a regular USB flash drive.

**Q4: Can I use the JD Drive for installing APPs or save my game data?**

A: No, it does not support. Apple devices do not permit any external drive to install Apps or save game data.

**Q5: Can I use this JD Drive flash drive without JD Drive App on my iOS 13 devices?**

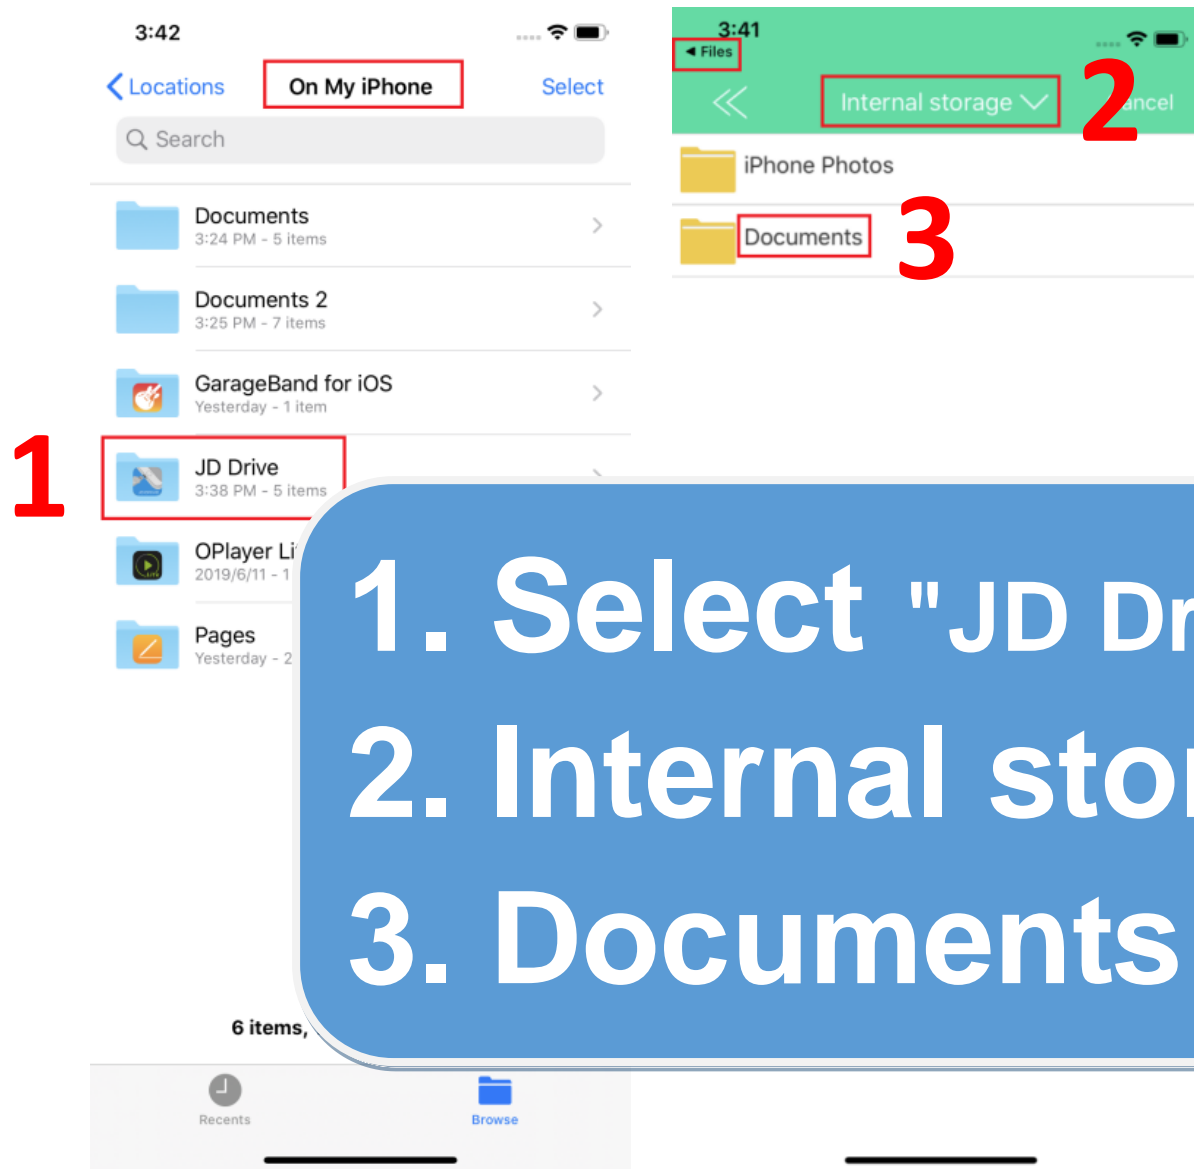

A: No, when this JD Drive is connected directly

with iOS devices. It needs to follow Apple MFi Protocol and only Apple certified APP is able to visit iOS devices. The program certifications between Apple MFi and normal OTG are different. Apple doesn't allow the compatibility between them. And the function of JD Drive App is stronger than the Apple's own file transfer function. It is more valuable to users.

**Q6: When I insert this JD Drive into an iOS 14 device, can I transfer files between Apple File and this JD Drive?**

A: Yes, you can transfer files between Apple File and JD Drive. After installing the JD Drive App into iOS 14 devices, there is the JD Drive under File (File --- Browse --- On My iPhone), and in the JD Drive App, there are iPhone Photos and Documents under Internal Storage.

Apple File and JD Drive are interlinked. Please contact [doralin147@gmail.com](mailto:doralin147@gmail.com) about the detailed operation.

**Q7: I have thousands of photos stored in the JD Drive and in my iPhone, but it only shows 499 pcs in the JD Drive and 1000 pcs in the iPhone from the JD Drive APP. Why doesn't the APP show the whole result?**

A: According to Apple's rules, the internal storage display 1000 pcs/page each time, external storage display 499 pcs/page each time. Only when you scroll up the page to the

lowest end, will the photos be displayed again in multiples.

We suggest to use the One-Click Backup function if there are lots of pictures need to transfer. All Photos would be transferred to this USB flash drive once Backup finished.

**Q8: When we transfer photos or videos, choose MultiSelect ---Select all --- Copy To, but the selected quantity is 499 for JD Drive**

**and 1000 for iPhone, only partial photos and videos are transferred.**

**A: The same Situation and Answer with the Question 7. Please take the above answer for reference.**

**Q9: What is the difference between the backup function and the photo/video transfer function?**

**A:Backup function: One-click backup is to**

back up all the videos and photos of your iPhone album with the click of a button.

(Backup is performed according to the album classification of your iPhone album)

After your backup is completed, you can delete photos and videos in your iPhone album at once.

**Photo/Video function:** You can select the photos and videos you want to copy for

classification and organization.

If you are using the Photo function to transfer and you want to delete the photos, you need to delete it manually.

**Q10: When the iPhone ran out of battery part way through the download. Will it restart the download at the point my iPhone lost its charge?**

A: If your iPhone suddenly runs out of power

while you are backing up, it will start where you stopped last time (it will not restart the backup).

Kindly be well noted that, low battery may cause Backup failed.

Please make sure that your iPhone have enough battery to backup.

**Q11 : Photos taken in “live” mode on iPhone cannot be viewed on computer after downloading. How do I view these ‘LIVP’**

## **format photos on PC?**

A: Live Photos feature is introduced by Apple and Apple's unique format which is only can be viewed directly on iPhone or iPad.

Please kindly understand that It's not supported directly reviewing on computers and JD Drive are not able to change any information of files, such as shooting time, format, size, etc.

If you want to view Live Photos on your PC, you

need to save the live photos as a video on iPhone firstly, and then click "Video" function, you can select the video you just saved and copy it to this iPhone photo stick and transfer to your PC. Then you can view this video forms live photos on your computer.

If any more about the Live Photos, please feel free to contact the customer service for help.

## 9.2 NOTES:

(1) You are not allowed to transfer downloaded media files (music & movies) from third party in your iPhone/iPad to the USB FLASH DRIVE. As they are DRM (Digital Rights Management) protected under iOS. However, you can download music and movies to computer firstly and transfer them to flash drive. Then play on your apple devices when this flash drive connected. If you find only partial

pictures (not all of them) can be transferred, that may be because you used 'iCloud' for storing pictures. There is no Access for JD Drive app to visit iCloud. In order to successfully back up all the pictures taken by your iPhone/iPad to flash drive. Please contact [doralin147@gmail.com](mailto:doralin147@gmail.com) about the detailed operation.

(2) It's normal that flash drive shows less capacity on PC and your devices than it states.

Because flash industry uses different measuring sizes from PC industry. You can know better from Wikipedia by search "Gigabyte".

(3) Please understand that this Apple MFi certified iPhone flash drive is main designed for iPhone and iPad, you need to install JD Drive app before using it on iPhone or iPad. And you can backup by one click or automatically. It also has sort photos and other strong and

convenient functions. But for computers (Windows or iMac with USB port), they don't need to install any app and have no one click backup function. It only works as a regular USB flash drive. That means if you want to back up or transfer photos from computer, you need to do it manually.
